

The *Non-Domestic* Renewable Heat Incentive

Overview

The *Non-Domestic* Renewable Heat Incentive (RHI) is a government funded scheme aimed at encouraging business owners and public sector bodies to make the switch from fossil fuel heating systems to a renewable heat solution.

By making this switch we can help the UK to reach the European Commission's Renewable Energy Directive to source 15% of its energy from Renewables by 2020.

Who is it for?

The *Non-Domestic* RHI supports industrial, commercial, public sector and not-for-profit organisations who have chosen a renewable heat solution.

A *Non-Domestic* installation is classed as a renewable heat unit that supplies large-scale industrial heating to small community heating projects. This includes small businesses, hospitals and schools as well as district heating schemes such as where one boiler serves multiple homes.

Eligible Renewable Technologies

- Biomass.
- Air Source Heat Pump.
- Ground Source Heat Pump.
- Solar Thermal.

What are the Tariffs?

When an installation is complete and registered under the *Non-Domestic* RHI scheme the business or non-profit organisation will receive quarterly payments over a 20 year period for using a green, renewable heat.

Biomass	Ground Source Heat Pump	Air Source Heat Pump	Solar Thermal
			
Tier 1: 4.4p Per kWh Tier 2: 1.56p Per kWh	Tier 1: 8.7p Per kWh Tier 2: 2.2p Per kWh	2.54p Per kWh	10p Per kWh

The tariffs for Biomass and Ground Source Heat Pump are tiered for the first 1,314 hours per annum.

All tariff rates will be adjusted inline with the Retail Price Index (RPI) on April 1st of each year.

The scheme is administrated by Ofgem and the tariffs set by governing body, the Department of Energy and Climate Change (DECC).

Payments are calculated by submitting quarterly Heat Meter reports to Ofgem.
